Key Features		
Commercial grade compact chilling dispensing solution. The G80 offers high performance for small to medium volume customers. Suits small and medium bars, cafés, restaurants or even the increasingly popular traveling bars that want to ice up their flooded fonts. Comes with flooding impeller pump and agitator as standard, all enclosed inside the unit for efficiency and ease in transport. The G80 is also completely enclosed including the removable lid, this will aid in cooling performance due to less heat loss. 8mm 304 Stainless tubing with welded 5/8" BSP male threads for a wider range of hose fitting needs. The G80 will drop the temperature of the product by approximately 15°C with one pass through the product lines. Hence we highly recommend if you are dispensing in an area that will be over 30°C, that you double up the lines. This kit therefore suits our 4 Tap T-Bar Font perfectly for warmer climate operations.
